
SOAPované distribuované systémy

Róbert Novotný

(UINF/KOPR, 18. november 2013)

20. storočie v Remote Procedure Calls

- milión rozličných protokolov
- binárne + proprietárne
 - RMI [Java]
 - DCOM [Microsoft]
 - CORBA [OMG]

RPC

Čo to je SOAP?

- *„SOAP is a lightweight protocol for exchange of information in a decentralized, distributed environment.“*
 - *Simple Object Access Protocol 1.1*

SOAP == webservisy

ľudová
slovesnosť

SOAP

envelope

- obsah správy
- adresáti
- povinnosť

encoding rules

- serializácia objektov
- formát dát v obsahu

RPC representation

- URI cieľa
- špecifikácia vzdialenej metódy

SOAP

- správa je vždy XML
- ľubovoľný transport
 - **binding**
 - default: HTTP

POST http://www.websvcicex.net/stockquote.asmx
SOAPAction: "http://www.webserviceX.NET/GetQuote"
Host: www.websvcicex.net
Content-Type: text/xml;charset=UTF-8

```
<soap:Envelope  
  xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
  <soap:Body>  
    <GetQuote xmlns="http://www.webserviceX.NET/">  
      <symbol>AAPL</symbol>  
    </GetQuote>  
  </soap:Body>  
</soap:Envelope>
```

Request

HTTP/1.1 200 OK

Content-Type: text/xml; charset="utf-8"

Content-Length: nnnn

Response

<soap:Envelope

xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"

<soap:Body>

<GetQuoteResult xmlns="http://www.webserviceX.NET/">

<Price>34.5</Price>

</GetQuoteResult>

</soap:Body>

</soap:Envelope>

Ako postaviť endpoint?

1. vezmem HTTP server
2. prijmem XML v požiadavke + naparsujem
3. spočítam výsledok
4. zlepím XML, pošlem do odpovede
5. ???

6. PROFIT!

Instantný SOAP service v Jave

- použijem JAX-WS 2.0
- priama podpora v JDK6!
- jedna trieda
- jeden spúšťač!

SOAP

Vytvorte "Hello World" endpoint v
JAX-WS 2.0

Použite **soapUI** / **curl** /
HttpRequester ako klienta.

JAX-WS: webservises v Java

- **operácie** = metódy obslužných tried
 - metódy ozdobíme @WebMethod / @WebParam
 - triedy ozdobíme @WebService
- **dáta** = triedy pre dáta
 - voliteľne ozdobíme JAXB anotáciami
 - serializácia medzi XML a objektami
- spustíme v SOAP serveri

@WebService

```
public class ChocolateService {  
    private List<Chocolate> chocolates  
        = new CopyOnWriteArrayList<Chocolate>();  
    public ChocolateService() {  
        chocolates.add(new Chocolate("Lindt Excellence 70%", 70));  
    }  
    public List<Chocolate> list() {  
        return chocolates;  
    }  
    public void add(Chocolate chocolate) {  
        chocolates.add(chocolate);  
    }  
}
```

všetky *public*
metódy sa
zverejnia

```
Endpoint.publish("http://localhost:10000/ws/chocolates",  
    new ChocolateService());
```

zverejní SOAP
službu cez
HTTP

pristupujeme
cez POST

navštívme
adresu v
browseri

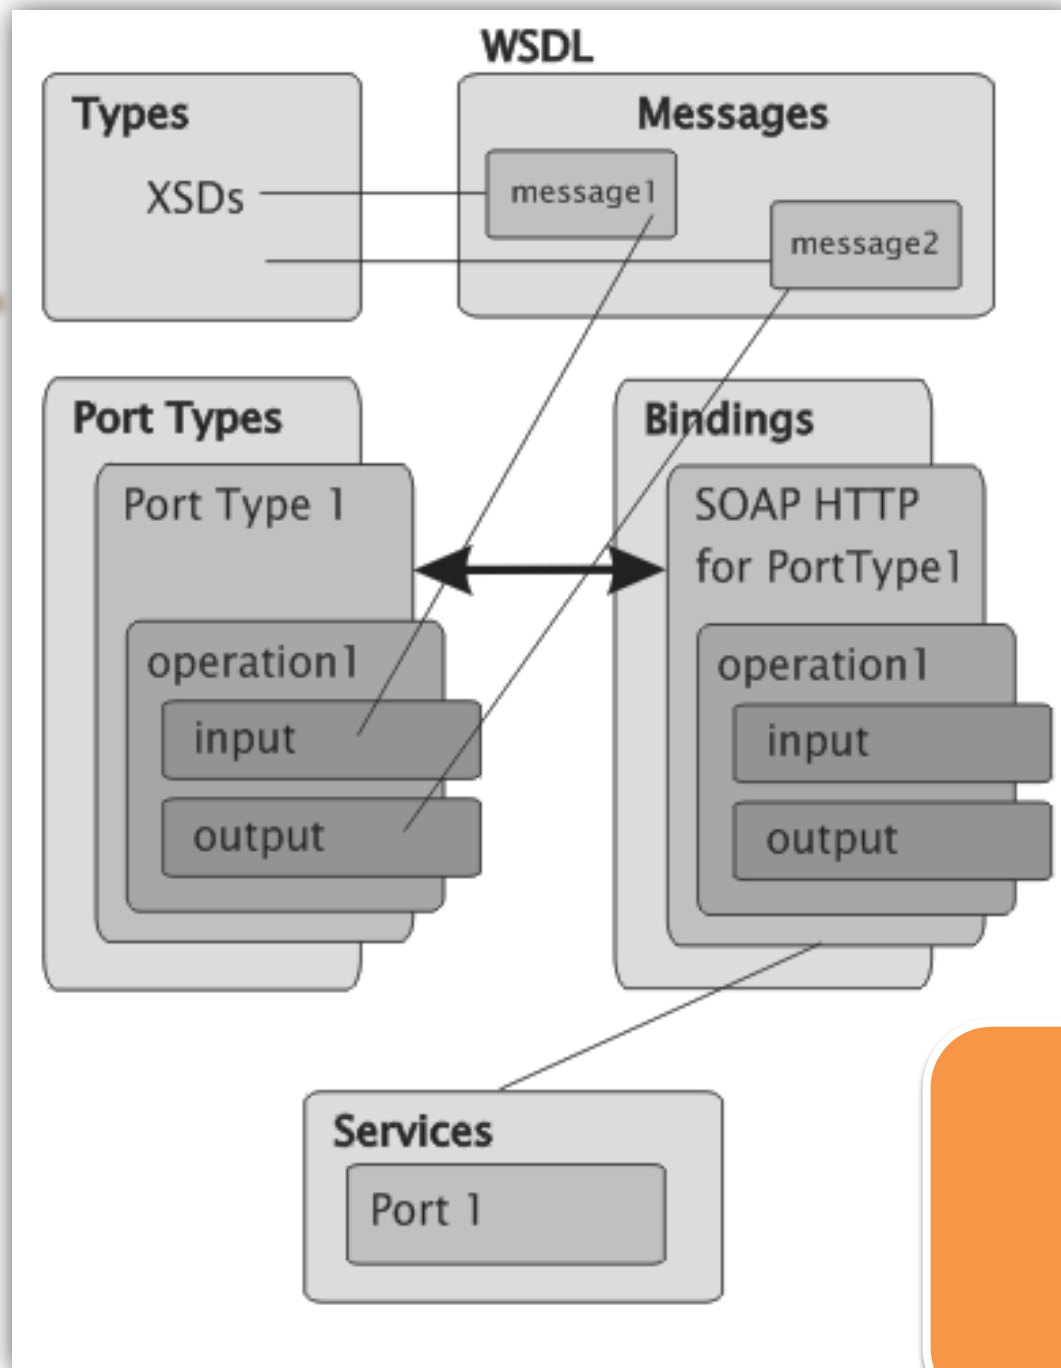

DEMO

[JAX-WS 2.0]

WSDL

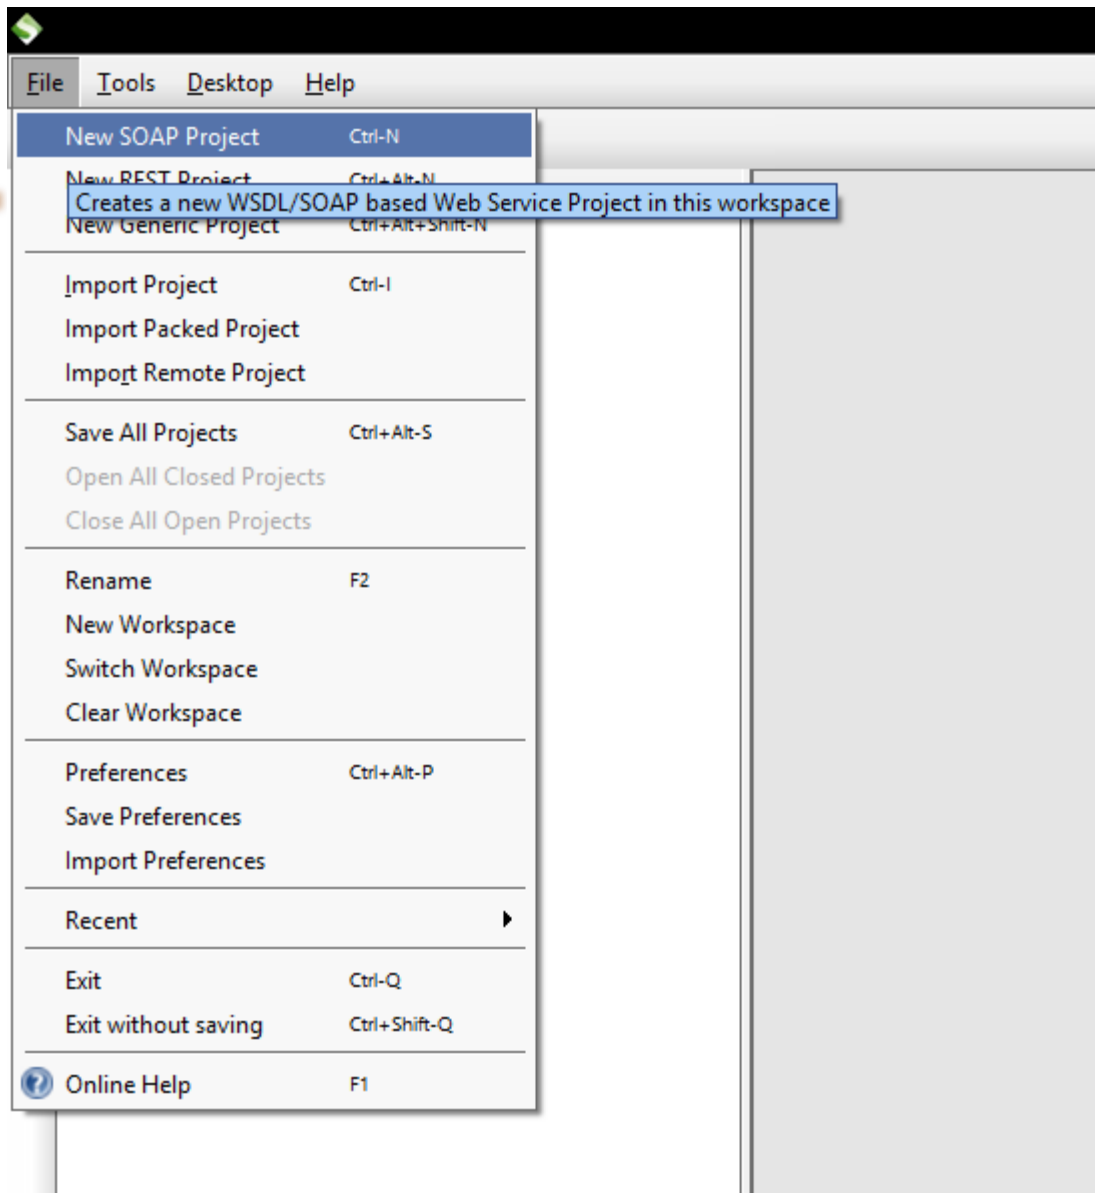

Web
Services
Description
Language

- metadátoový popis webovej služby
 - operácie?
 - dátové typy?
 - štýly?
 - bindings?
- XML formát pre čítanie strojom
- z neho možno generovať **klientov!**

štruktúra
WSDL

Vytvorte klienta pre službu v JAX-
WS 2.0 pomocou SoapUi

AP

New SOAP Project

Creates a WSDL/SOAP based Project in this workspace

Project Name: chocolates

Initial WSDL: http://localhost:10000/ws/chocolates?wsdl

Create Requests: Create sample requests for all operations?

Create TestSuite: Creates a TestSuite for the imported WSDL

Relative Paths: Stores all file paths in project relatively to project file (requires save)

spustenie dopytu

The screenshot displays an IDE interface for a SOAP service. On the left, a 'Projects' tree shows a project named 'chocolates' with a 'ChocolateServicePortBinding' containing two operations: 'add' and 'list'. The 'add' operation is selected, and its 'Request 1' is highlighted. The main window shows the raw XML for the request and response. The request XML is as follows:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <soapenv:Header/>
  <soapenv:Body>
    <jax:add>
      <!--Optional:-->
      <arg0>
        <percentage?</percentage>
      <!--Optional:-->
      <title?</title>
    </arg0>
  </jax:add>
</soapenv:Body>
</soapenv:Envelope>
```

The response XML is as follows:

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:addResponse xmlns:ns2="http://jaxws" />
  </S:Body>
</S:Envelope>
```

At the bottom of the window, the status bar indicates 'response time: 19ms (181 bytes)' and a zoom level of '1:1'.

po zmene
API treba
aktualizovat'
klienta

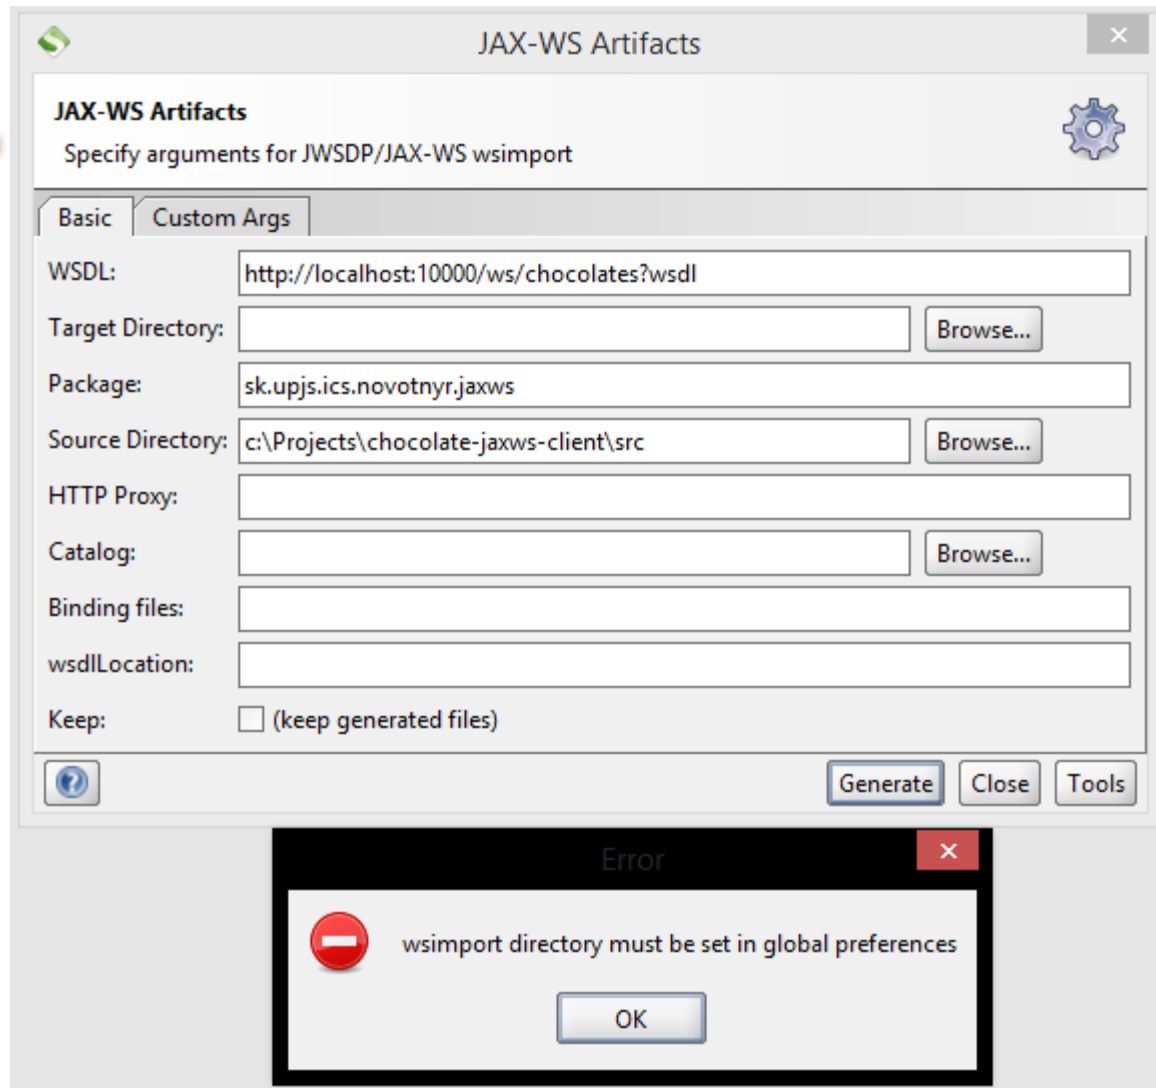

The screenshot shows an IDE interface with a project tree on the left containing 'chocolates' and 'ChocolateService'. A context menu is open over the 'ChocolateService' interface, listing various actions. The 'Update Definition' option is selected and highlighted in blue. A tooltip for this option reads: 'Reloads the definition for this interface and its operations'. The background shows a 'Request 1' window with a URL 'http://localhost:10000/ws...' and XML content including 'ns:soapenv="http://sch...' and '</percentage>'. The IDE interface also shows 'Raw' and 'XML' tabs on the right side of the editor.

Vygenerujte JAX WS 2.0 klienta
pomocou SoapUI.

Generates JAX-WS artifacts using wsimport

zmenit' cestu k wsimport

The image shows the SoapUI Preferences dialog box. The title bar reads "SoapUI Preferences" with a close button (X) on the right. Below the title bar, it says "SoapUI Preferences" and "Set global SoapUI settings" with a wrench icon. A left-hand sidebar lists various settings categories: HTTP Settings, Proxy Settings, SSL Settings, WSDL Settings, UI Settings, Editor Settings, Tools, WS-I Settings, Global Properties, Global Security Settings, WS-A Settings, loadUI Settings, Web Recording Settings, Global Sensitive Information Tokens, and Version Update Settings. The main area contains a list of settings, each with a text field and a "Browse..." button. The "JAX-WS WSImport:" setting is highlighted by an orange callout shape. Its text field contains the path "C:\java\jdk7\bin". Other settings include JBossWS wstools, JAX-RPC WSCompile, Axis 1.X, Axis 2, .NET 2.0 wsdl.exe, XFire 1.X, CXF 2.X, ANT 1.6+, GSoap, and JAXB xjc. At the bottom, there is a "Hermes JMS:" setting.

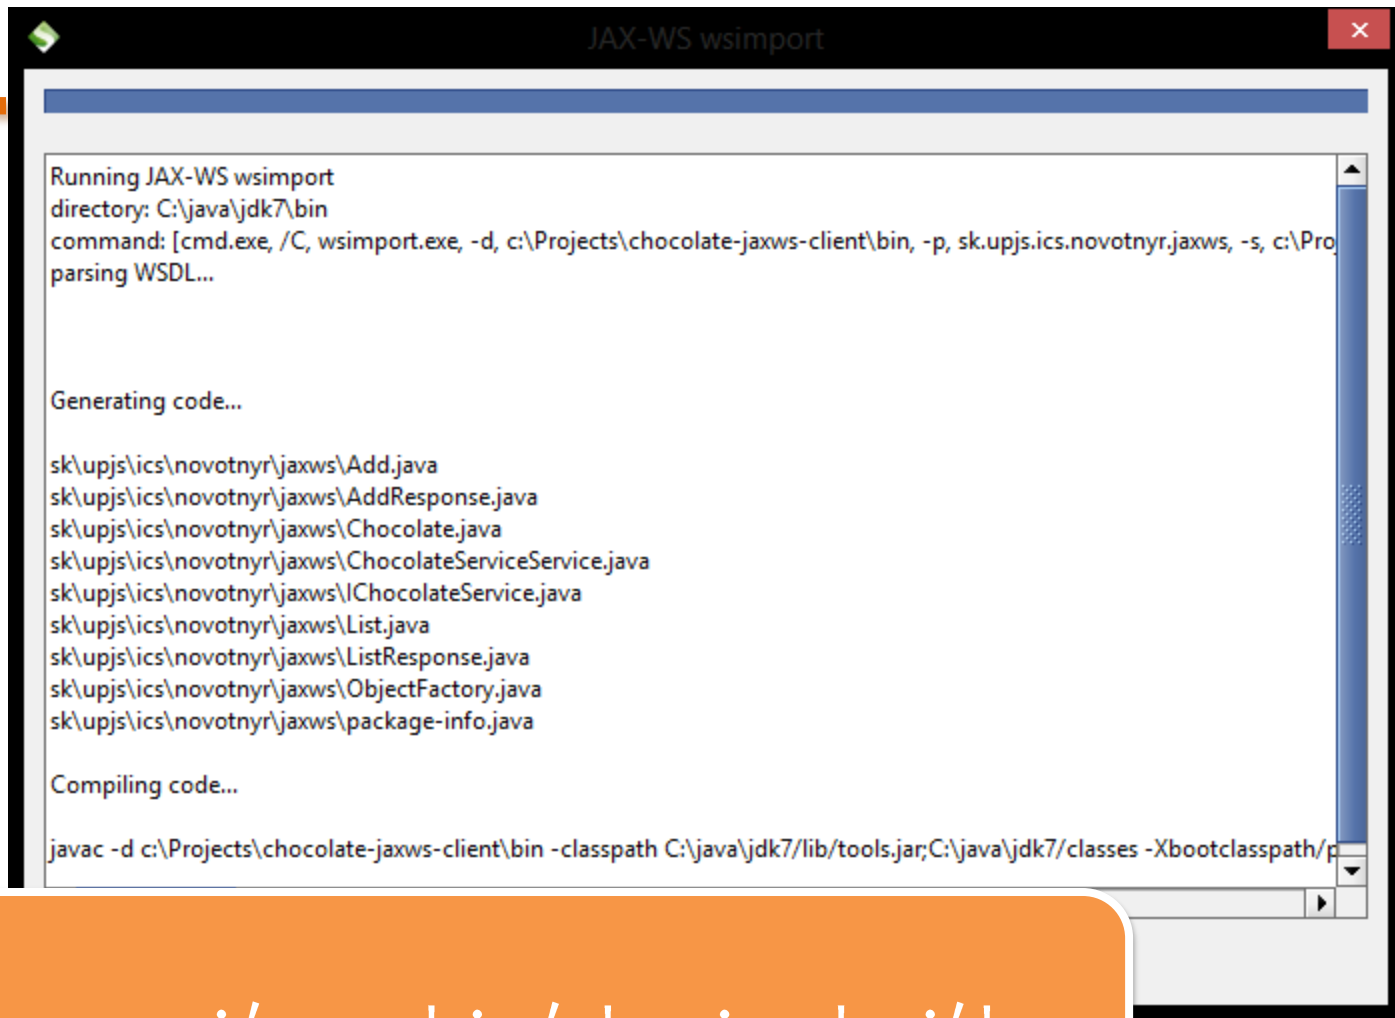

Setting Name	Value	Action
JBossWS wstools:		Browse...
JAX-RPC WSCompile:		Browse...
JAX-WS WSImport:	C:\java\jdk7\bin	Browse...
Axis 1.X:		Browse...
Axis 2:		Browse...
.NET 2.0 wsdl.exe:		Browse...
XFire 1.X:		Browse...
CXF 2.X:		Browse...
ANT 1.6+:		Browse...
GSoap:		Browse...
JAXB xjc:		Browse...
Hermes JMS:		

zmenit' cestu k wsimport

wsimport je v adresári
JDK, vedľa *javac*

Generovat!

```
JAX-WS wsimport

Running JAX-WS wsimport
directory: C:\java\jdk7\bin
command: [cmd.exe, /C, wsimport.exe, -d, c:\Projects\chocolate-jaxws-client\bin, -p, sk.upjs.ics.novotnyr.jaxws, -s, c:\Pro
parsing WSDL...

Generating code...

sk\upjs\ics\novotnyr\jaxws\Add.java
sk\upjs\ics\novotnyr\jaxws\AddResponse.java
sk\upjs\ics\novotnyr\jaxws\Chocolate.java
sk\upjs\ics\novotnyr\jaxws\ChocolateServiceService.java
sk\upjs\ics\novotnyr\jaxws\IChocolateService.java
sk\upjs\ics\novotnyr\jaxws>List.java
sk\upjs\ics\novotnyr\jaxws>ListResponse.java
sk\upjs\ics\novotnyr\jaxws\ObjectFactory.java
sk\upjs\ics\novotnyr\jaxws\package-info.java

Compiling code...

javac -d c:\Projects\chocolate-jaxws-client\bin -classpath C:\java\jdk7\lib\tools.jar;C:\java\jdk7\classes -Xbootclasspath/p
```

vygenerujú sa binárky i zdrojáky

Ako vytvoriť klienta v main()

- vytvoriť inštanciu SOAP service
- z nej získať inštanciu portu
- na porte volať metódy

```
ChocolateServiceService service = new ChocolateServiceService();  
IChocolateService port = getChocolateServicePort();  
List<Chocolate> chocolates = port.list();
```

port je nerozoznateľný od servisnej implementácie na serveri

Sumár

- vieme vytvoriť JAX-WS 2.0 server i klient
- Java<->Java
- čo však s **interoperabilitou**
 - medzi jazykmi a platformami?
- čo však so **stabilitou** API?

garantované riešenie: ručné WSDL
